

Supermajor Delivers on the Promise of Mobility

“ Lease operators say **they save 2 hours with JOYN**. They no longer write down in a grease book, then enter it on a gauge sheet, and end of day enter data on a laptop. Also, the superintendents are using **Live Tracking** to see batteries with production immediately, and to monitor average LO time at each stop.

” **- Field Mobility IT Lead**

Who we serve

- Oil and Gas Supermajor that has currently deployed JOYN

Why now and Why JOYN

- Growth in shale assets without incurring incremental G&A costs
- Capitalize on investments in automation and instrumentation
- Solve for paper-based processes that curtailed mobility in the field
- Partner with proven, speedy SaaS vendor, and not lose time with DIY approach
- Deliver on “last mile lease operator connectivity” as part of the digital oil field vision

What we delivered

- **JOYN iPhone mobile app** with intuitive data capture for at least 65+ reading types - production accounting, chemicals, and well problem that auto-sync; creating immediate production data reporting
- Integration with Production Accounting system
- Closed loop communication with field office and lease operators with Live Maps that track operator location, real time production data and issues at well head
- Provided daily morning production reports
- Provided run ticket reports, flare meter report, well problem report, plunger inspection reports, and chemical reports
- 24/7 remote support ensures immediate remedial action and error free operations

What value we generated

- Gave 2 hours back each day, per lease operator with mobile data capture
- Immediate alerting of problems at well pad; before it took about one week
- Ensure lease operator is fixing the correct well and not idle too long through
- Relieve Production Accounting system of non-production allocation related readings (eg: chemicals)
