

JOYN2

The First Pump By Exception Mobile App For Everyone In The Oilfield.

Pump by exception is now for each and every field worker. Every activity in the oilfield is now a task - instantly allocated, leveraging intelligent task workflows and integrated instrumentation. Artificial intelligence engine matches the best worker with the most critical tasks, and update status instantly.

The platform integrates with product accounting, enterprise asset management and SCADA systems for unified view of tasks, field resources and status.

Geo fence triggered alerts and synthesized data from multiple SCADA on one platform ensure field safety and efficiency.

With JOYN 2, your oilfield is fully connected. No more delays. No more wait for work orders. No more back and forth on prioritizing field activities.

CAPABILITIES

- Create and prioritize tasks with AI powered task-to-resource matching engine in the app
 - through integrated work orders from ERPs, EAMs;
 - with algorithm-based risk assessment of SCADA readings
- Maneuver unplanned and planned tasks better with location intelligence
- Activate gamification as artificial intelligence algorithms score each worker based on skills, work history and user ratings
- Get instant status updates on tasks and rate each worker on job success
- Enable end of route review for each worker
- Capture production, environmental inspections and chemicals data, LIVE
- Speed up allocations with instant data capture through image recognition of Run Tickets
- Integrate with production accounting systems to eliminate intensive collation and validation processes
- Own data in one platform to create dashboards and reports of choice
- Track costs, uplift and improvement in skills and experience levels
- Improve field safety compliance with synthesized SCADA data and geofence specific alerts

FEATURES

- Artificial intelligence based resource-to-task matching engine
- Machine learning powered intelligent task workflow engine
- One platform for integrated data from SCADA, Production Accounting and Enterprise Asset Management systems
- Cloud-delivered mobile app
- Configurable in-app analytics & reporting
- Geo-fence
- Auto-sync
- Available on iOS

INTEGRATED SYSTEMS*

- EAM – IBM Maximo, SAP
- Accounting/ERP
- Economics and reserves
- Well ops/management
- Production accounting
- SCADA/ IoT – Wonderware, Tanklogix, Cygnet, OSI-Pi, ClearSCADA and XSPOC

BENEFITS

- Manage the entire field through one mobile app
- Gain 40% time back with automated task allocation and prioritization
- Optimize utilization of each field resource to pump more with the same
- Improve field safety compliance with automated rationalized alerts

**TYPICAL INTEGRATIONS - further systems can be integrated if needed.*
