

SCALABILITY

EH&S Readings Configured on JOYN for Field Safety Compliance

Scattered EH&S Forms Risk Field Compliance

An oil and gas major in the Permian used manual paper records and excel sheets to capture AVO readings and other compliance forms. Lease operators entered data in disparate forms stored in varying places (notebooks, LAN folders, emails, etc), making compliance records difficult to access and share when needed. This was a drain on the lease operators time and lacked corporate visibility, running the risk of missing compliance requirements that could attract huge penalties.

CASE STUDY

EH&S Readings Configured on JOYN for Easy Access and Better Compliance

Simple configuration of AVO and other EH&S readings on JOYN ensured lease operators fill the forms right in the field on their app. Being a cloud based platform, JOYN provides a scalable solution to easily access these readings from anywhere, anytime, equipping supervisors to automate desired reports within minutes. The reports are always live, with the latest EH&S data required to meet compliance standards.

Complete Field Compliance on JOYN

Before, the forms resided in separate systems, reports were created in varied tools and shared through email, printed copies, LAN files, etc. The process was time consuming, prone to error, inaccessible and resulted in a trust deficit to meet or exceed compliance goals. Today, the last mile delivery is simplified. Right from capturing EH&S data in the field on JOYN app, to building, sharing and automating reports on a web interface – everything is on the JOYN platform.
